PROFILE

IT undergraduate with hands-on experience in networking, systems troubleshooting and cloud/software development, including designing and deploying a serverless application end-to-end on AWS. Skilled in Java, Linux and core networking (routing, switching, subnetting, IP addressing), with practical experience across AWS (Amplify, API Gateway, Lambda, DynamoDB, IAM) and foundational GCP knowledge. Comfortable collecting, organising and analysing technical data carefully and accurately, and quick to pick up new tools and platforms. Looking to bring a collaborative, detail-oriented approach to an entry-level technology role.

SKILLS

- Networking: routing & switching, subnetting, IP addressing, network troubleshooting & diagnostics
- Systems: Windows, Linux, helpdesk support
- Cloud: AWS (Amplify, API Gateway, Lambda, DynamoDB, IAM), GCP (foundational)
- Programming & Tools: Java, JavaScript, Rust, Solidity, React.js, Node.js, Apache Kafka, Git/GitHub Actions (CI/CD), VS Code
- Ways of working: collaborative troubleshooting, clear technical documentation, structured problem-solving

TRAINING & INTERNSHIPS

CCNA Training — CTTC, Bhubaneswar

Aug 2025 – Feb 2026

- Practised routing & switching fundamentals and structured subnetting/IP planning on lab networks
- Diagnosed and resolved simulated network faults individually and in group labs, documenting steps taken

Industrial Training (Computer Hardware & Networking) — CTTC, Bhubaneswar

Jul 2025

- Completed NSQF-aligned training covering hardware assembly, configuration and network fundamentals

EDUCATION

Bachelor of Technology, Information Technology

Sept 2022 – July 2026

DR BC Roy Engineering College, Durgapur (MAKAUT) • CGPA: 6.9 / 10.0

Intermediate (Class XII), CBSE

April 2021 – May 2022

Jamshedpur Public School, Jamshedpur • 70.8%

ICSE, Class X

March 2019 – March 2020

Sister Nivedita English High School, Jamshedpur • 90.8%

PROJECTS

To the Power of Math! — Serverless AWS Web App

September 2026

- Designed and deployed a production-style serverless architecture end-to-end: AWS Amplify (CI/CD, static frontend hosting) → API Gateway → Lambda → DynamoDB
- Wrote least-privilege IAM policies scoping each service to only the permissions it needed
- Built for scalability and cost-efficiency with no dedicated servers; auto-deploys on every push via CI/CD

Web3 Threat Monitoring Dashboard

Mar 2026 – Jun 2026

- Engineered an end-to-end Web3 threat monitoring pipeline using Rust, Reth WebSockets and Apache Kafka to ingest live EVM mempool data and detect malicious activity
- Designed a heuristic risk-evaluation engine calculating threat scores to trigger an automated Solidity circuit breaker, halting attacks in under 222 ms
- Developed an interactive Security Operations Center (SOC) dashboard in React.js, Node.js and Chart.js to visualise real-time analytics and system alerts

Academic Projects

- JavaScript Web Projects (Oct 2025) — Built a series of practical mini-projects from a Udemy course to strengthen core JavaScript, HTML and CSS fundamentals
- Virtual Memory Manager, Mini Project (Oct–Dec 2024) — Built a simulator in C for an Operating Systems course, translating logical to physical addresses via page tables and a TLB

CERTIFICATIONS

- Cisco Certified Network Associate (CCNA) — CTTC, Bhubaneswar (Aug 2025 – Feb 2026)
- Computer Hardware & Network Management — CTTC, Bhubaneswar (Jul 2025)
- Linux Command Line: From Zero to Hero — Udemy (Dec 2025)
- Industrial Training on Networking — Indian School of Ethical Hacking (Mar–Oct 2023)
- Hardware & Network Basics — Cisco Networking Academy (Nov 2023)
- GitHub Actions for CI/CD & Python Coding — LinkedIn Learning (Mar 2026)
